CONTRACT N01-AG-8-2106

RATS Barrier 202C

ANIMAL FACILITY	STRAIN	NO./SEX	AGE	TESTING LABORATORY/DATES
Location: Indianapolis, IN Barrier/Building: 202C Ship Date: 12/4/06	F344/NHsd	3M/0F	17 months	University of Missouri UMRADIL, Columbia, MO Receipt Date: 12/5/06 Report Date: 2/19/07
	F344 x BN F1	4M/0F	17 months	

EVALUATION
NIA rats submitted for this health monitoring were obtained from NIA-NIH aging colonies maintained in barriers by Harlan. All rats examined were considered to be in a good state of health.

SEROLOGY			
Agent	Assay	No. Pos./ No. Tested	Comments
<i>M. pulmonis</i>	MFI	0/7	*Previously tested negative.
Sendai	MFI	0/7	
RCV/SDAV	MFI	0/7	
Parvoviruses	MFI	0/7	
KRV	MFI	0/7	
H-1	MFI	0/7	
PVM	MFI	0/7	
REO 3	MFI	0/7	
TMEV GDVII	MFI	0/0*	
LCM	MFI	0/0*	
Hantaan	MFI	0/0*	
<i>E. cuniculi</i>	MFI	0/0*	

BACTERIOLOGY		
Agent	No. Pos/No. Tested	Comments
<i>Salmonella spp.</i>	0/7	Nasopharynx/cecum cultures. The bacteria isolated from the oropharynx and cecum are opportunistic or normal flora of the rat.
<i>Pasteurella pneumotropica</i>	0/7	
<i>Pasteurella spp.</i>	0/7	
<i>Bordetella bronchiseptica</i>	0/7	
<i>Pseudomonas aeruginosa</i>	0/7	
<i>Citrobacter rodentium</i>	0/7	
<i>Corynebacterium kutscheri</i>	0/7	
<i>Klebsiella pneumoniae</i>	4/7	
<i>Klebsiella oxytoca</i>	0/7	
<i>Staphylococcus aureus</i>	0/7	
<i>Streptococcus sp. Group B beta</i>	1/7

RATS Barrier 202C

PCR	Results	Comments
<i>Mycoplasma pulmonis</i> <i>Helicobacter spp.</i>	No. Pos./No. Tested 0/7 0/7*	*Pooled samples. Previously positive.

PARASITOLOGY		
Type and Test	Results	Comments
Ectoparasites Test(s): Direct pelage	No. Pos./No. Tested 0/7	External parasites were not observed in any rat.
Endoparasites Test(s): Direct, Gross, and Microscopic (intestines & bladder)	No. Pos./No. Tested 0/7	Enteric and urinary bladder parasites were not observed in any rat.

PATHOLOGY		
Gross:	None Significant	Overall frequency of lesions in these rats is low.
Histologic: Basal cell tumor	1/7	

AVAILABILITY		
Rats obtained from NIA-NIH aging colonies maintained in one maximum security barrier by Harlan in Indianapolis, Indiana. The combined census of these colonies at the time of referenced monitoring is tabulated below:		
Virgin Male (15 - 33 months of age)		348
Virgin Female (N/A months of age)		0
Total Census:		348

RATS Barrier 208B

PCR	Results	Comments
	No. Pos./No. Tested	
<i>Mycoplasma pulmonis</i>	0/10	
<i>Helicobacter hepaticus</i>	0/10*	*Pooled samples.

PARASITOLOGY		
Type and Test	Results	Comments
Ectoparasites	No. Pos./No. Tested	External parasites were not observed in any rat.
Test(s): Direct pelage	0/10	
Endoparasites	No. Pos./No. Tested	Enteric and urinary bladder parasites were not observed in any rat.
Test(s): Direct, Gross, and Microscopic (intestines & bladder)	0/10	

PATHOLOGY		
Gross:	None Significant	Overall frequency of lesions in these rats is low.
Histologic:		Lesions are incidental and/or consistent with normal aging process and are not indicative of infection with murine adventitious pathogens.
Lymphoid infiltrates	1/4	
Renal perivascular lymphoid infiltrates	1/4	
Harderian gland infiltrate	1/4	
Testicular interstitial cell tumor	1/4	

AVAILABILITY		
Rats obtained from NIA-NIH aging colonies maintained in one maximum security barrier by Harlan in Frederick, Maryland. The combined census of these colonies at the time of referenced monitoring is tabulated below:		
Virgin Male (15 - 42 months of age)		851
Virgin Female (24 - 49 months of age)		81
Total Census:		932
